Education Background

Tongji University Shanghai, China
Bachelor of Software Engineering 09/2022–07/2026

- GPA: 4.60/5.0 (90.96/100); Rank 50/197 (25.38%)
- Honors: First-Class Outstanding Student Scholarship; Third-Class Outstanding Student Scholarship

Hong Kong University of Science and Technology (Guangzhou) Guangzhou, China
Computational Media and Arts 09/2026-06/2028

Internship Experience

Red Note Shanghai, China
Product Engineer (formerly Client-side Development) 11/2025–05/2026
Search Technology Team ·Android Development (REDAndroid main repository, Kotlin/Java)

Q&A Line

- **Q&A DOM Tree Anomaly Detection:** In Debug mode, real-time collection and visualization of rendering trees (DOM logs) of Native and DSL components in Q&A Onebox/landing pages;
- **Q&A Network Request Monitoring:** Using KMP approach, visual monitoring of network requests received by Q&A from the backend in Debug mode;
- **CNY Special:** Spring Festival Gala timeline list Native and DSL development;

Search Interaction Line

- **Unified Search Top Interaction Logic:** Unified the interaction of the top area (search bar, tab bar, TagSearch) of search result pages across foldable devices, tablets, and small-screen devices with standard mobile behavior.
- **Client-side Code Refactoring:** Try-catch governance in search module; standardizing exception handling; stabilizing experimental code;

Other Business

- **Medical AI Risk Warning:** Independently developed DSL templates for sensitive medical search scenarios in Q&A and integrated risk warning components to ensure AI safety and compliance;
- **Search Stability APM:** Implemented asynchronous APM reporting module decoupled from logging, covering five sub-scenarios: search, recommendation, image search, Q&A, and voice search;
- **CNY Special:** Led post-Spring Festival CNY resource cleanup to reduce package size; fixed bottom navigation ghosting bug during CNY; fixed anchor offset issue when navigating from map Onebox to landing page;

Projects

Mobile Intelligent Task Management Assistant 07/2025–10/2025
HKUST (Guangzhou) & Huawei Collaboration Project

Project Objective: Developed an intelligent mobile task management assistant

- Implemented micro data collection module: semantic organization and classification based on multimodal content for task discovery and recommendation
- Developed task-space interaction module: user intent alignment and collaboration via visual interface
- Built user profiling module: modeling user preferences from interaction history and feedback
- Full-stack development including Android (Java, React Native), frontend (Vue), backend (Python), and database design (MySQL)
- Solved key challenges including lack of continuous intent alignment in AI logging systems and limitations in multimodal expression

- Github: https://github.com/LucasFrancis23213/AndriodAppHelper

SimuPanel: Immersive Multi-Agent Academic Discussion System 02/2025–04/2025

HKUST (Guangzhou) Prof. Fan Mingming APEX Lab

Project Objective: Developed an LLM-based interactive system simulating academic roundtable discussions

- Designed and implemented virtual agent system capable of dynamic participation in academic discussions
- Developed real-time evaluation system for audience interaction and agent speech assessment
- Used Python stack with matplotlib for visualization and multithreading for synchronization
- Github: https://github.com/LyonIsland/APEXEAServer
- Arxiv: SimuPanel: A Novel Immersive Multi-Agent System to Simulate Interactive Expert Panel Discussion

Other Projects

- **Lost and Found Platform Development:** Built a web platform for posting lost item notices, unclaimed item handling, matching, and return records. Backend implemented using C#
- Github: https://github.com/LucasFrancis23213/DatabaseCourseDesign
- **Real Estate Investment Financial Model based on RAG-LLM:** Built an intelligent investment analysis system generating financial models and reports. Backend in Python; frontend with HTML/CSS/JavaScript. Github: https://github.com/ayanami2004/Financial-Automation-Modeling-Based-on-LLM
- **Unity-based Multi-Personality Agent Simulation:** Studied the impact of initial personality traits on agent behavior. Built sandbox environment in Unity with OpenAI integration. Github: https://github.com/LyonIsland/NiceTow
  Arxiv: Evolving Agents: Interactive Simulation of Dynamic and Diverse Human Personalities
- **Elderly Companion Embodied Conversational Agent:** Developed a user-friendly virtual agent to reduce social isolation among elderly users. Built with Unreal Engine 5 MetaHuman SDK; used ElevenLabs for speech synthesis; Python for audio processing; Live Link Face for facial capture. Github: https://github.com/LucasFrancis
- **Computer Vision Projects** https://github.com/LucasFrancis23213/computer_vision_projects
- **Automatic Speech Recognition Projects** https://github.com/LucasFrancis23213/speech_recognition_projects

Technical Skills

- **English:** CET-6: 602; TOEFL 100 (Speaking 25)
- **Vibe Coding:** Proficient in Cursor, Claude Code, Codex
- **Programming Languages:** C/C++, Java, Python, C#, HTML, CSS, JavaScript, Kotlin
- **Databases:** Oracle, MySQL, SQLite
- **Development Environment:** Linux VM, Windows, MacOS
- **Frameworks:** Unity, Unreal Engine, OpenCV, MediaPipe, VUE, KMP
